

Puerto Rico • United States • UK • Ireland

total instrumentation and control systems engineering solution provider

Date: Jan 13, 2012

Positions: Instrument Technicians (Level I, II & Senior)

Location: Co. Cork, Ireland

PACIV, a global instrumentation, control systems integration and regulatory compliance engineering firm with offices in Puerto Rico, United States, UK and now Ireland, servicing BioPharmaceutical, Medical Device, F&B and Utilities clients, is looking for permanent role based Instrument Technicians (Level I, II and Senior) for its Ireland office.

Job Description:

The Instrument Technicians will be responsible for various activities required within the development and delivery of instrumentation and control systems of our BioPharmaceutical, Medical Device, F&B and Utilities clients. They will support the development and delivery of industrial automation systems including the related testing and qualification documentation.

Position Responsibilities/Essential Functions

- Manage, lead and execute the handling of process instrumentation for large capital projects. From supporting the procurement of such instruments to receipt verification, warehousing, delivery to site, installation, calibration, testing, and commissioning. This includes the handling of critical data within the instrumentation process, compliance with procured specifications.
- Assist in the fabrication of control system panels as well as wiring termination and panel checkout
- Responsible for installation, qualification, testing and functional loop check testing (via process control system HMI)
- Responsible for entrance of instrument data sheets into Computer Maintenance Management Systems (CMMS).
- Support our clients during delivery of projects with equipment troubleshoot, commissioning and repair providing technical support and expertise with instrumentation.
- Knowledge in the development and execution of Preventive Maintenance (PM) and Corrective Maintenance (CM) procedures for such instruments and automated systems.

Requirements

- Scientific and/or technical degree in electrical or instrumentation & controls engineering
- Minimum of two (2) years experience in instrumentation and control systems, preferably within GMP regulated industries.
- Strong analytical and problem-solving skills
- Works well with others, within a team and takes accountability
- Result driven and self-motivated
- Strong interpersonal and communication skills (verbal and presentation)

Other Requirements

- Location: Cork, Ireland

Compensation

- Competitive Salary and Benefits Package
